AXE – A TEST AUTOMATION SOLUTION THAT ACTUALLY DELIVERS

As organisations strive to meet customer and business demand, deliver Cloud and mobile computing technologies, traditional workstation based platforms and web- based applications, the challenges to grow revenue and remain profitable have never been greater.

However, rapid implementation of new technology presents its own complexity, and innovative thought processes and platforms are required to deliver and maintain modern applications rather than attempting to use traditional approaches.

With new delivery components comes the challenge of interoperability, and rather than applying more tools to the task, the most beneficial approach will come from simplifying the process, which in turn streamlines delivery and quality of applications, allowing businesses to control risk and meet their goals.

In order to provide the agility to meet the integration needs of organizations, a rapid dependable and flexible test automation platform is critical.

Disappointingly, despite vendor claims to fully enable automating testing, the reality has been somewhat different. All too often projects have failed due to over-complex unwieldy under-performing applications, consuming specialist resources over prolonged timeframes, all at huge cost.

Consequently, to date, cost effective test automation that actually delivers an ROi has been an aspiration rather than a reality.

The Axe Test Automation Process

Stage 1

Testers design tests in Microsoft® Excel. No code, no scripts, just business logic and data in a simple modular format.

Stage 2

With one click test scripts and documentation are automatically built by Axe.

Stage 3

Execute tests in a range of market leading test automation tools. Axe leverages the strengths of the tools without the complexity.

Redefining Test Automation

Axe leads a new generation of automated software testing products. Axe provides a means to rapidly deploy automated testing systems that can be used by all levels of staff with minimal training. This reduces the cost of introducing and maintaining test automation by a factor of four.

Manual Scripts

Automated Scripts

Non-UI Automated Scripts

ABOUT THE AXE PLATFORM

Axe is a unique and disruptive technology, cost effective, simple and cross industry it is quickly becoming a global brand with a prestigious list of large organizations using it across the **US, Africa, Australia, Europe and India**.

Axe leads a new generation of automated software testing products. Axe provides a means to rapidly deploy automated testing systems that can be used by all levels of staff with minimal training. This reduces the cost of introducing and maintaining test automation by a factor of four.

The advantage is that it is extremely easy to implement, very open for modification for non-standard applications and environments, and easy to integrate with any existing test management and source control systems already in place.

Non-technical users will have no trouble working with its optimized action word methodology, assisted by out-of-the-box spreadsheet templates for test design that largely overcome any problem dealing with complex scenarios.

GLOBAL REACH

Operating for over a decade, Odin are industry experts in the design, development and implementation of test automation products and solutions to clients in the US, Africa, Australia, Europe and India.

Odin works with leading independent marketing representatives, implementation experts, technology and strategic partners to deliver unrivalled product, consultancy and application support across all industry sectors, locations and size, with scalable, cost effective test automation.

Our carefully selected partners are proven in quality delivery of solutions, which are instrumented, interconnected, and intelligent.
